

E-Procurement

A web-based platform that is designed to support your entire sourcing cycle from requisition to purchase order by managing RFX, e-auction, e-catalogs, contract management and other critical processes.

Intengo e-procurement manages and controls the entire purchasing process from needs assessment to invoice management. With our e-procurement solution you will increase your amount of spend under management very easily by leveraging Software as a Service (SaaS) model, proven methodology, and a simple smart user interface.

What will e-procurement help you to achieve?

Save time & money

Eliminate thousands of paper or fax-based communications and replace them with more accurate and standardized electronic documents. Workflow efficiencies and electronic search capabilities drive process efficiencies, dramatically lowering typical purchasing cycle times.

Increase visibility

With our e-procurement solution, you can customize processes and modules to fit your unique purchasing processes and increase your spend under management control. You can have better procurement visibility and easily receive any desired report about your expenses.

Minimize maverick spending

By direct ordering for employees, the need to “shop” around for products diminishes. Purchasing department negotiates with suppliers to ensure full compliance of products and employees can place orders from their desktops, all resulting in minimized maverick spending.

Concentrate on strategic functions

By automating daily tasks, Intengo e-procurement allows purchasing department to focus on strategic supplier relations. With e-procurement, corporate purchasing function moves from being a cost center to becoming a value-adding contributor to the corporate bottom line.

“E-Procurement helps us to evaluate suppliers in a neutral zone. Without an effect of a person or corporation, a truly objective competition between suppliers can be achieved. Price is being formed by participants through bidding which helps reaching the lowest cost, by the suppliers own will. This means the final price is the closest to the real minimum market price.”
